Ultimate Impostrip® Connect

Ultimate Impostrip® Connect lets you integrate the impositioning functions of Ultimate Impostrip® into your workflows.

This feature adds the **RunImpostripOnJob** step template to the list of supplied step templates. When configured correctly, the step template submits a PDF print job to the Ultimate Impostrip® input hot folder that is set up to perform the appropriate impositioning functions on the job. RICOH ProcessDirector waits for the Ultimate Impostrip® server to return the updated job, then continues processing with the next step in the workflow.

To work with RICOH ProcessDirector, Ultimate Impostrip® Automation or Ultimate Impostrip® Scalable must be installed on:

- A RICOH ProcessDirector Application server
- A separate computer running Microsoft Windows Server 2016 or Microsoft Windows Server 2019

⬇ Note:

- If Ultimate Impostrip® is installed on a Windows computer running in a language other than English, do not install Ultimate Impostrip® in the default install directory. The program does not work properly with non-English default install paths. We recommend installing Ultimate Impostrip® in `C:\ImpostripOnDemand` on non-English Windows computers.
