Sending other types of jobs to a printer that uses RICOH TotalFlow Print server

To send other types of jobs, such as PostScript, to a printer that uses RICOH TotalFlow Print server, you can either copy the jobs to a printer hot folder or use an LPR command.

1. Click the **Administration** tab.
2. In the left pane, click **Devices** → **Printers**.
3. Click **Add** → **Passthrough Printer**.
4. On the **General** tab, fill in values for all the required fields.
5. To copy the job to a printer hot folder, update the **Printer command** property with a command that copies the print file to the correct location on the printer that uses RICOH TotalFlow Print server.
6. To send the job using an LPR command, update the **Printer command** property with the appropriate command. For example, you could use a command such as:

```
lpr -P virtualprt1 ${getFileName(print,ps,read)}
```

7. Continue with the procedure for [Configuring media for a Ricoh TotalFlow printer](#).
