Connecting to the InfoPrint 5000 hot folder

To copy files into a hot folder on an InfoPrint 5000, that hot folder must be mounted to the RICOH ProcessDirector primary server.

You can mount the hot folder using the **smbmount** command.

⬇ Note:

- If either RICOH ProcessDirector or the InfoPrint 5000 printer is shut down, you need to re-issue the **smbmount** command.

To issue a **smbmount** command:

1. Log in to the primary RICOH ProcessDirector as root.
2. Enter this command for Model AS1:

```
>smbmount //printerIPAddress/simplex /mnt -o guest,fmask=777
```
3. Enter this command for Model AD1/2:

```
>smbmount //printerIPAddress/duplex /mnt -o guest,fmask=777
```
4. To view the enabled hot folders, list the contents of the shared directory:

```
>ls -al /mnt
```
