## Usage scenarios for pulling documents from a job

These scenarios show how you might offer new services to clients by extracting documents from a job and sending them through steps that provide special processing.

### In this section:

[Usage scenario for pulling reminder notices from a job when late payments are received](#)

In this scenario, a service bureau prints reminder notices in a PDF print job for a client when customers miss payments. The service bureau holds the print job until 3:00 PM. Between 1:00 PM and 3:00 PM, the client sends a pull list, which contains the account numbers of customers who have made late payments. The service bureau suppresses the reminder notices for those customers from printing by extracting the reminder notices from the print job.

[Usage scenario for pulling policies based on addresses in a disaster area](#)

In this scenario, a service bureau prints policies in a PDF print job. Because severe flooding has made mail delivery impossible in two postal codes, the service bureau suppresses the printing of policies with customer addresses in those postal codes. It removes those policies from the print job and emails them to customers.
