# Running the FusionPro sample workflow

The FusionPro Connect feature provides a sample workflow that you can examine and run to understand how the feature works. The sample includes a hot folder input device and a workflow that includes the **RunFusionPro** step.

The sample objects used in this workflow are:

- Hot folder input device: FusionProFolder
- Sample print job: FusionProSample.csv
- Workflow: FusionProSample
- Sample template: Ricoh Sample Template.zip

Review the properties for each object before you start the procedure to see how they interact.

To run the sample workflow:

1. Upload the sample template file provided by the FusionPro Connect feature:
  1. Log in to the machine where FusionPro is installed.
  2. Start **FusionPro Server Dashboard**.
  3. Go to **Template Manager** and select the **Template** tab.
  4. Go to **Collected Template Zip file** and click **Browse** to select: Ricoh Sample Template.zip  
The sample template is stored in the /aiw/aiw1/samples/fusionpro folder.
  5. Set the **Group name** to Ricoh Sample Group.
  6. Set the **Template name** to Ricoh Sample Template.
  7. Optional. Enter a description for the selected template.
  8. Click **Upload**.
2. Click the **Main** tab.
3. In the **Printers** portlet, right-click the **Sample** printer and select **Enable**.
4. In the **Input Devices** portlet, right-click the **FusionProFolder** hot folder input device and select **Enable and Connect**.  
The first time you try this procedure, RICOH ProcessDirector immediately submits the job containing the FusionProSample.csv sample file to the workflow. If you need to submit the same file again, copy the sample CSV file to the hot folder again.  
The workflow sends the job FusionPro where the CSV file is composed and converted to a PDF file. Next, the job is processed by the **CountPages** and **CreatePagesRanges** steps before being sent to the sample printer. After the jobs reach the **PrintJobs** or **RetainCompletedJobs** step, you can view the job to see or download the PDF file.
