# Configuring for the Advanced Transform feature

If you have installed one or more input and output transforms for the Advanced Transform feature, you can create workflows that use those transforms.

Installation of the Advanced Transform feature is not complete until you install license keys for the input and output transforms that you want to use.

### In this section:

[Creating workflows that use input and output transforms](#)

After you install one or more input and output transforms for the Advanced Transform feature, you can create workflows that use those transforms.

[Creating a workflow that transforms AFP or PostScript input to PDF output with media information](#)

If you have installed the Advanced Transform feature, you can create a workflow that transforms AFP or PostScript input into PDF output. The transform also generates a JDF job ticket that has media information, including page exceptions.
