Configuring to use inline resources with line data jobs

If you submit line data jobs with inline resources to a workflow that uses the **ConvertLineDataJobIntoAFP** step, most inline resources are ignored. To recognize and use other inline resources, you must update the **ConvertLineDataJobIntoAFP** step.

The inline resources are ignored because the value of the **Resource type** property for the **ConvertLineDataJobIntoAFP** step of the workflow contains these values: **Form definition**, **Fonts**, **Inline**. The value **Inline** indicates that RICOH ProcessDirector keeps all inline form definitions and fonts (the other values in the list) and does not write any other inline resources from the data stream to the output file. As a result, even if AFP Download Plus or Download for z/OS includes page definitions or other resources inline with the job, RICOH ProcessDirector does not write them to the output file. To keep additional inline resources, you must update the value of the **Resource type** property for the **ConvertLineDataJobIntoAFP** step in the workflow.

To configure to use inline resources with a line data print job:

1. Click the **Workflow** tab.
2. Click the name of the workflow that you want to edit, for example, **DownloadLineData**.
3. **Optional:** Disable the workflow by clicking the switch to the left of the workflow name.
If you do not disable the workflow while you edit it, jobs that use this workflow continue to move through steps. When you save, the workflow is momentarily disabled then enabled again. Jobs that are processing in the workflow could move into error.
4. Right-click the **ConvertLineDataJobIntoAFP** step and select **Properties**.
5. Click **AFP**.
In the **Resource type** field, you see a list of resources with **Inline** and **Form definition** selected.
6. Add other types of inline resources to the **Resource type** by holding the **Ctrl** key and selecting the types of resources in the list.
7. Click **OK**.
8. To save and enable the workflow, change , the Save & Enable/Disable switch, to the On position.
