Manually assigning a workflow to an input file

If you have not set up your system so that input devices assign workflows to input files or if an error occurred with automatic assignment, you can manually assign a workflow to an input file by resubmitting the file.

To manually assign a workflow to an input file:

1. In the Input Devices portlet, right-click the input device that holds the input file that you want to work with and select **Show Files**.
2. Right-click the file that you want to assign a new workflow to and select **Resubmit**.
This operation resubmits all input files that share the submit group of the selected input file.
3. Click **Different workflow** and select a workflow from the list.
4. Click **OK**.
5. Click **CLOSE**.
