RICOH Transform features

RICOH Transform features provide a powerful and cost-effective system for transforming jobs to or from the format for AFP printing.

The RICOH Transform features are:

- PostScript/PDF to AFP
Converts PDF and PostScript into AFP.
- RICOH PCL to AFP
Converts PCL into AFP.
- RICOH SAP to AFP
Converts SAP OTF and ABAP into AFP.
- RICOH AFP to PDF
Converts AFP into PDF.

All RICOH Transform features include image transforms (GIF to AFP, JPEG to AFP, and TIFF to AFP), which convert GIF, JPEG, and TIFF images to AFP. The APPE conversion tool is also installed with the RICOH Transform features.

The RICOH Transforms are invoked as jobs are processed using these step templates provided by the AFP Support feature:

- TransformJobIntoAFP
- TransformJobIntoPDF

Add one of those steps to a workflow and set the correct options on the **Transform** tab.

Prerequisite: AFP Support

 **Note:**

- You cannot install the RICOH Transform features using Feature Manager.
- You use the InfoPrint Transform Manager user interface and help system for some Transform configuration tasks. If you install more than one Transform feature, they share the InfoPrint Transform Manager interface.
- A separate license key is required for each purchased transform.
