/ Assigning content to white space

# Assigning content to white space

You can assign image and text content to defined white space areas by creating rules that determine what content is assigned and under what conditions it is assigned.

You must create one or more white space definitions before you can assign content.

## In this section:

### [Creating rules for assigning content](#)

You create one or more rules for assigning content to white space so you can target the content for specific customers or for the best use of available space.

### [Inserting content text](#)

You can define the text you want inserted as white space content.

### [Inserting content images](#)

You can define the images you want inserted as white space content.

### [Modifying content text](#)

You can modify the text you have defined for white space content.

### [Modifying content images](#)

You can modify the images you have defined for white space content.

### [Creating rule conditions for content](#)

You can create rule conditions that determine when content is assigned to white space.

### [Modifying rule conditions for content](#)

You can modify rule conditions that determine when content is assigned to white space.

### [Deleting content from white space](#)

You can delete rules, conditions, and content that you have assigned to white space definitions.
