Configuring

Deleting text strings

You can delete a string of text that was created with AFP Editor. You cannot delete text in the AFP file itself (instead, you can create areas to hide text).

To delete a text string:

1. In RICOH Visual Workbench, open a sample AFP file and the control file that contains the definitions for text strings.

2. Click **Mode ⇒ AFP Editor**.

3. Click **Tools ⇒ Modify Definitions**.
   You see the Modify and Delete Definitions window with a list of text strings.

4. Select the text string that you want to delete.

5. Click **Delete**, or press the Delete key on your keyboard.
   The text string is removed from the list.

6. To close the Modify and Delete Definitions window, click **X** in the upper right corner.
