Overview

Usage scenarios for AFP jobs

These scenarios show the steps that a workflow might follow as it processes AFP jobs that contain documents.

In this section:

Sorting (one-to-one) job scenario

This scenario describes how you can sort a job so that its documents print in a certain order.

Splitting (one-to-many) job scenario

This scenario describes how you can divide a large job into smaller ones. One benefit of this approach is that it might reduce overall printing time.
