Overview

Cut Sheet support for TASKalfa feature

The Cut Sheet support for TASKalfa feature provides support for Kyocera TASKalfa 15000c production printers with the EFI Printing System 50 option (EFI Fiery DFE).

TASKalfa printer devices represent printers that can print PDF or Postscript files. They print jobs in PDF or Postscript format, including jobs converted to PDF or Postscript format.

The Cut Sheet support for Kodak feature adds the ability to create **TASKalfa printer** devices. This type of printer can accept PostScript or PDF files. If both formats of a file exist in the job's spool directory when the job is scheduled for printing, the file with the most recent time is sent to the printer. If a transform converts a PostScript file to PDF, the PDF format of the file is sent to the TASKalfa printer.
